

Insights for Improvement

- A Series of Workshops Presented by Omnex Canada -

Omnex Canada invites you to participate in *Insights for Improvement*, a series of complimentary workshops covering timely topics in quality and process improvement. The program for Fall 2003 is as follows:

ISO/TS 16949:2002 – Lessons from the First Year

Presenter: Pat Ambrose, IATF Approved ISO/TS 16949:2002 Third-Party Lead Auditor

Many early adopters of ISO/TS 16949:2002 were not well prepared for transition. We will analyze and discuss the key 'lessons learned' one year after rollout. Participants will gain knowledge and insight to help them manage a more efficient transition within their organization.

Mr. Ambrose has over 25 years experience in the design, development, implementation and improvement of quality systems. He has worked as a Quality Engineer, Quality Engineering Manager and General Plant Manager in the Automotive, Office Equipment, Metal Fabricating and Firearms industries.

Integrating Lean Manufacturing and Six Sigma

Presenter: Ron Mitchell, Director of Lean and Six Sigma Services for Omnex

Six Sigma generates quantifiable improvements in product and process quality. Lean Manufacturing reduces lead-time and inventory. Omnex has integrated these two methodologies to create a unique Lean Six Sigma System. Participants will learn of the specific opportunities for cost reduction and revenue growth that come with the adoption of this System.

Mr. Mitchell has over 20 years experience in Lean Manufacturing and Quality Improvement. He studied the Toyota Production System at NUMMI (the Toyota – General Motors joint venture facility in California), and was part of the team that helped launch Synchronous Manufacturing at General Motors.

Omnex is the leading global provider of training, consulting and software services for quality and process improvement methodologies. Our clients include industry leaders such as Delphi Automotive Systems, General Motors, Johnson Controls, Magna International, Mobil Oil, Motorola, Philips, Texas Instruments and Visteon, among others.
